Profile

Full-stack Software Engineer and AI developer with 5+ years building and scaling production systems. Combines backend engineering (Cloudflare Workers, FastAPI, Node.js), AI/ML development (PyTorch, Gemini API, computer vision), and Linux infrastructure administration into end-to-end delivery. Proven track record shipping client projects across civic applications, AI platforms, and IoT systems, from architecture to deployment. Co-founder of Nexara, a digital agency, and GuppyNodes, a game hosting infrastructure provider.

Experience

Founder <i>Nexara – Digital Freelance Agency</i>	<i>Remote</i> <i>2025 – Present</i>
Co-founded a digital agency delivering full-stack web, AI, and automation solutions to clients; managing project scoping, delivery, and client communication.	
Co-Founder and Systems Administrator <i>GuppyNodes – Hosting Infrastructure</i>	<i>Remote</i> <i>Aug 2024 – Present</i>
- Built automated deployment pipelines for a scalable Linux hosting platform serving gaming servers and Discord applications. - Designed active defense mechanisms mitigating Layer 4/7 DDoS attacks and proxy abuse across hardened server environments.	
Backend Developer <i>Wihda – Civic Neighbourhood Application (Client Project)</i>	<i>Remote</i> <i>Jan 2026</i>
- Delivered a full production backend using Cloudflare Workers, D1, R2, KV, Queues, and Durable Objects, covering auth, neighbourhood management, real-time chat, and FCM push notifications. - Prevented fraudulent submissions in the Cleanify module via R2 presigned URLs with an enforced 20-minute upload gate and idempotent moderation flows. - Architected a WebSocket real-time messaging system backed by Durable Objects with message persistence in D1.	
Tech Lead <i>University AI and Robotics Club (ARC)</i>	<i>Oum El Bouaghi, Algeria</i> <i>Mar 2025 – Present</i>
Built LLM-powered Telegram bots that automatically summarise discussions and manage event logistics for the club team.	
Network Infrastructure Intern <i>SONATRACH</i>	<i>Skikda, Algeria</i> <i>2025</i>
Hands-on exposure to enterprise managed switches, next-generation firewalls, and server room operations in a large-scale industrial IT environment.	

Projects

EcoLens <i>React/TS, Hono, Cloudflare Pages, Supabase, YOLOv8, Groq</i>	1st Place — <i>National AI Hackathon Apr 2026</i>
Led backend and AI pipeline for a wildlife discovery platform built end-to-end in 48 hours. Stack: YOLOv8x-seg, ByteTrack, OpenCLIP, Llama 3.3 70B via Groq, deployed on Cloudflare Pages with Hono and Supabase.	
SmartPark <i>Android, Firebase, ESP32, Chargily</i>	<i>May 2025</i>
Full parking management system: Android app + web dashboard + IoT hardware (ESP32, TCRT5000 sensors, servo gate control) with integrated Chargily payments, 3 user roles, and automated penalty enforcement.	
Pineapple AI <i>Python, Gemini API, discord.py</i>	<i>2021 — Present</i>
Scaled an AI Discord bot to 3,000+ communities via sharding; engineered a memory-efficient RAG system with safeguards against prompt-bloat and data leakage.	
NeuroDZD <i>Python, PyTorch, OpenCV</i>	<i>2025</i>
95% accuracy on Algerian currency recognition (ResNet50 CNN); built a real-time 3D visualizer for neural network layers; open-sourced model and dataset on Hugging Face.	

Education

Bachelor of Computer Science <i>University of Larbi Ben M'hidi, Ranked 1st in cohort</i>	<i>Oum El Bouaghi, Algeria</i> <i>Sep 2023 – Jun 2026</i>
Research accepted at IEEE EDiS 2026: Secure on-device Edge AI pipeline for Arabic handwriting recognition, quantized to 28 MB for offline Android deployment.	

Technical Skills

Languages: Python, TypeScript, JavaScript, C/C++, SQL (PostgreSQL, SQLite), Bash, HTML/CSS
Frameworks: FastAPI, Next.js, Node.js, Hono, PyTorch, discord.py, React
Infrastructure: Linux Administration, Cloudflare Workers, D1, R2, Durable Objects, Docker, Nginx, Firebase
AI/ML: PyTorch, Gemini API, OpenCV, YOLOv8, RAG systems, TFLite
Security: Linux Hardening, DDoS Mitigation, Web Exploitation (OWASP Top 10), Wireshark
